European Technical Assessment

ETA-21/0857
of 29/05/2026

General Part

Technical Assessment Body issuing the ETA: Technical and Test Institute for Construction Prague	
Trade name of the construction product	fischer hollow ceiling anchor FHY
Product family to which the construction product belongs	Torque-controlled expansion anchor for use in concrete for redundant non-structural systems
Manufacturer	fischerwerke GmbH & Co. KG Klaus-Fischer-Straße 1, 72178 Waldachtal Germany
Manufacturing plant	fischerwerke
This European Technical Assessment contains	12 pages including 9 Annexes which form an integral part of this assessment
This European Technical Assessment is issued in accordance with Article 95(4) of Regulation (EU) 2024/3110, on the basis of	EAD 330747-00-0601 Fasteners for use in concrete for redundant non-structural systems
This version replaces	ETA-21/0857 issued on 06/02/2022

Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full (excepted the confidential Annex(es) referred to above). However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific parts

1. Technical description of the product

The fischer hollow ceiling anchor FHY is a torque-controlled expansion anchor made of galvanised or stainless steel. It consists of an expansion sleeve and a cone with an internal thread and is anchored by torque-controlled expansion with a hexagon head bolt or threaded rod with nut and washer.

By tightening the screw/nut, the cone is pulled into the expansion sleeve and expanding it.

The product description is given in Annex 1.

2. Specification of the intended use in accordance with the applicable European Assessment Document (hereinafter EAD)

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the products in relation to the expected economically reasonable working life of the works.

3. Performance of the product and references to the methods used for its assessment

3.1 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1 according to EN 13501-1
Resistance to fire	See Annex C2 and Annex C3

3.2 Safety and accessibility in use (BWR 4)

Essential characteristic	Performance
Characteristic resistance for all load directions and modes of failure for simplified design	See Annex C1
Durability	See Annex B1

4. Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the Decision 97/161/EC of the European Commission, the system of assessment verification of constancy of performance (see Annex IX to Regulation (EU) 2024/3110) is system 2+.

5. Technical details necessary for the implementation of the AVCP system, as provided in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Technical and Test Institute for Construction Prague.

Following standards will be referred to in this European Technical Assessment:

EN 1993-1-4:2025	Eurocode 3 - Design of steel structures - Part 1-4: Stainless steel structures
EN 1993-1-4/NA:2020	National Annex - Nationally determined parameters - Eurocode 3: Design of steel structures - Part 1-4: General rules - Supplementary rules for stainless steels
EN ISO 4042:2022	Fasteners - Electroplated coating systems
EN ISO 898-1:2013	Mechanical properties of fasteners made of carbon steel and alloy steel - Part 1: Bolts, screws and studs with specified property classes - Coarse thread and fine pitch thread
EN ISO 898-2:2022	Fasteners - Mechanical properties of fasteners made of carbon steel and alloy steel - Part 2: Nuts with specified property classes
EN 13501-1:2018	Fire classification of construction products and building elements - Part 1: Classification using data from reaction to fire tests
EN ISO 3506-1:2020	Fasteners - Mechanical properties of corrosion-resistant stainless steel fasteners - Part 1: Bolts, screws and studs with specified grades and property classes
EN ISO 3506-2:2020	Fasteners - Mechanical properties of corrosion-resistant stainless steel fasteners - Part 2: Nuts with specified grades and property classes
EN 10139:2016+A1:2020	Cold rolled uncoated low carbon steel narrow strip for cold forming - Technical delivery conditions
EN ISO 683-7:2024	Heat-treatable steels, alloy steels and free-cutting steels - Part 7: Bright products of non-alloy and alloy steels
EN 10088-1:2023	Stainless steels - Part 1: List of stainless steels;
EN 10088-2:2024	Stainless steels - Part 2: Technical delivery conditions for sheet/plate and strip of corrosion resistant steels for general purposes
EN ISO 4017:2022	Fasteners - Hexagon head screws - Product grades A and B
EN 206:2013+A2:2021	Concrete - Specification, performance, production and conformity

Product description
Product label and dimensions

Annex A2

Specifications of intended use

Fastenings subject to:

Size	FHY, FHY R			
	M6	M8	M10	M12
Hammer drilling with standard drill bit			✓	
Hammer drilling with hollow drill bit with automatic cleaning 			✓	
Static and quasi-static loads Cracked and uncracked concrete Fire exposure			✓	

Base materials:

- Compacted reinforced and unreinforced normal weight concrete without fibres (cracked and uncracked) according to EN 206.
- Strength classes ≥ C20/25 according to EN 206.
- Pre-stressed hollow core slabs, where the cavity width does not exceed 4,2 times the web width ($b_H \leq 4{,}2 \times b_{St}$) with strength classes ≥ C45/55.

Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (FHY, FHY R)
- For all other conditions according to EN 1993-1-4 corresponding to corrosion resistance class
  - CRC III: FHY R

Design:

- Fastenings are to be designed under the responsibility of an engineer experienced in fastenings and concrete work
- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to reinforcement or to supports, etc.).
- Design under static or quasi-static actions shall be performed in accordance with EN 1992-4, design method B.

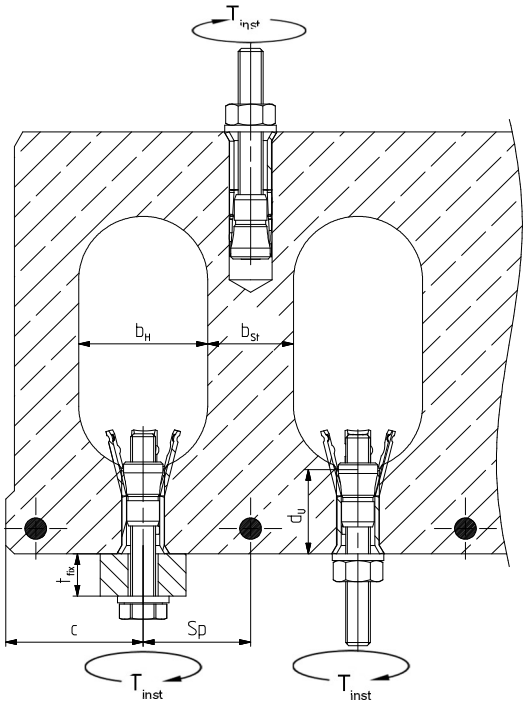
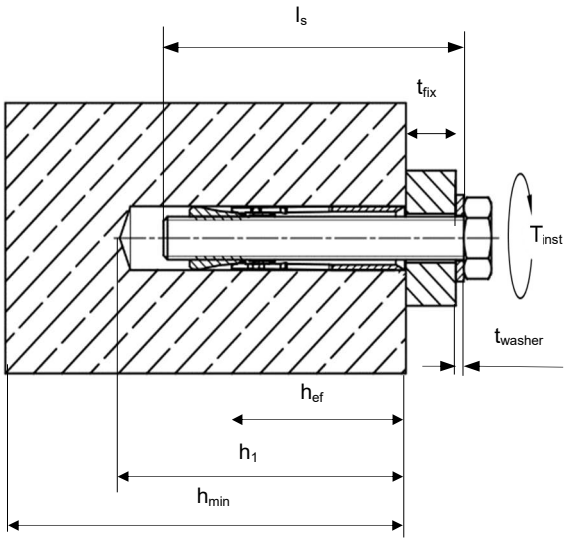
Intended use Specifications	

Table B2.1: Installation parameters

Size			FHY, FHY R			
			M6	M8	M10	M12
Nominal drill hole diameter	d_0 =	[mm]	10	12	16	18
Effective embedment depth	h_{ef} ≥		30	35	40	40
Depth of drill hole to deepest point	h_1 ≥		50	60	65	70
Diameter of clearance hole in the fixture	d_f ≤		7	9	12	14
Length of screw [1]	l_s ≥		37 + t_{washer} + t_{fix}	43 + t_{washer} + t_{fix}	52 + t_{washer} + t_{fix}	55 + t_{washer} + t_{fix}
Length of the threaded bolt	l_b ≥		42 + t_{washer} + t_{fix}	50 + t_{washer} + t_{fix}	60 + t_{washer} + t_{fix}	65 + t_{washer} + t_{fix}
Required setting torque FHY	T_{inst} =	[Nm]	8	10	20	30
Required setting torque FHY R	T_{inst} =	[Nm]	15	20	40	50
[1] For screws with shaft according to EN ISO 4017 the shaft length must be ≤ t_{fix}						
Pre-stressed hollow core slab ≥ C45/55 web thickness ≥ 25mm						
Minimum spacing	s_{min} ≥	[mm]	70	70	80	80
Minimum edge distance	c_{min} ≥	[mm]	100	100	100	150
Solid concrete ≥ C20/25						
Minimum spacing	s_{min} ≥	[mm]	70	70	80	80
Minimum edge distance	c_{min} ≥	[mm]	100			
Minimum thickness of concrete member	h_{min} ≥	[mm]	100			



Anchoring in pre-stressed hollow core slabs and in solid material



S_p = Distance to the tensioning strands
t_{fix} = Thickness of fixture
d_u = Thickness of the slab web
c = Edge distance
T_{inst} = Installation moment
b_H = Cavity width
b_{st} = Web thickness

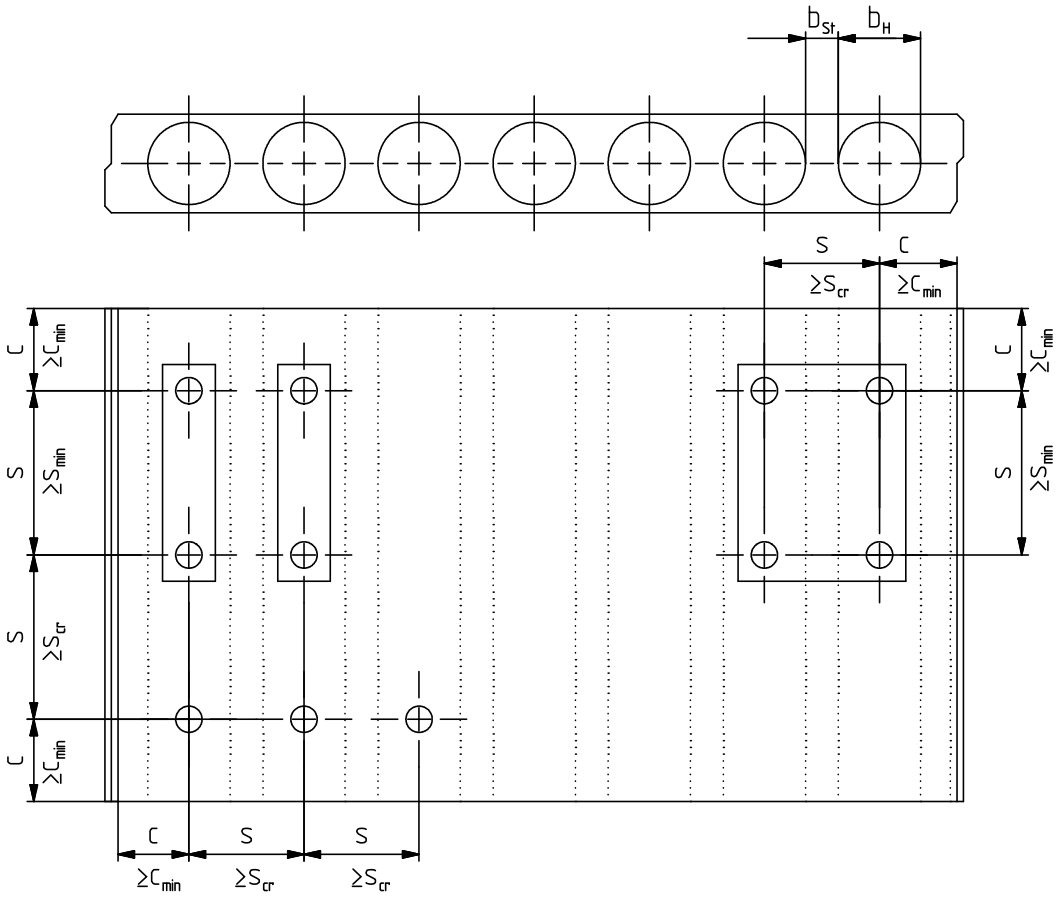
Installation parameters

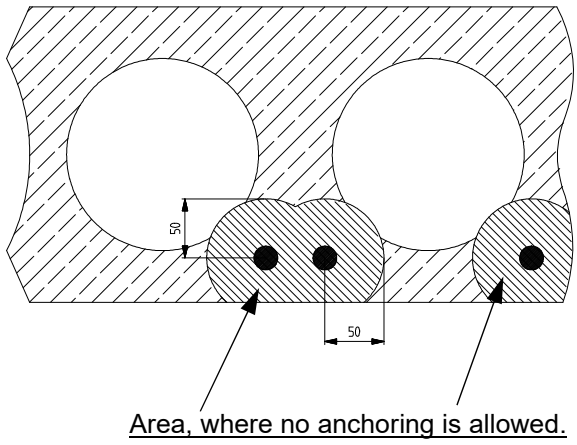
Annex B2

Picture B3.1: Anchoring in pre-stressed hollow core slab – Anchoring condition: $b_H \leq 4{,}2 \times b_{St}$



s_{min} and c_{min} see Annex B2 – s_{cr} see Annex C1.

Picture B3.2: Minimum distance S_p to the tensioning strand



The anchor must have a distance from the anchor axis to the tensioning strands of at least 50 mm.

Figures not to scale

fischer hollow ceiling anchor FHY	
Intended use Installation parameters	**Annex B3**

Installation instructions:

- Fastener installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters on the site.
- Hammer or hollow drilling.
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement.
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application.
- In Precast pre-stressed hollow core slabs the anchor FHY may be installed from all directions, if the web thicknesses is ≥ 25mm and the spacing to the tensioning strands of ≥ 50mm is observed (also in the area of solid material).

1a) Hammer drill (e.g. fischer Quattric II)		 **Prestressed hollow core slabs:** Determine and mark the position of the tensioning strands, e.g. with a suitable scanner.	 **Solid material/solid areas of hollow core slabs**
1b) Hollow drill (e.g. fischer FHD)		 Drill the hole with automatic cleaning	-

Installation of the fastener (exemplary in a pre-stressed hollow core slabs)
