For the design the complete assessment ETA-15/0352 has to be considered.⁹⁾

- ¹⁾ The partial safety factors for material resistance as regulated in the ETA-15/0352 as well as a partial safety factor for load actions of γ_L = 1,4 are considered. As an single anchor counts e.g. an anchor with a spacing s \geq 3-h_{ef} and an edge distance c \geq 1,5-h_{ef}. Accurate data see ETA-15/0352.
- ²⁾ For higher concrete strength classes up to C50/60 higher permissible loads may be possible.
- ³⁾ Drill method hammer drilling resp. hollow drilling. For further allowable drill methods see ETA-15/0352.
- ⁴⁾ The anchorage depths smaller than 40 mm are only allowed for single anchors as part of a multiple fixing of non-structural systems.
- ⁵⁾ Diamond drilling not permitted.
- ⁶⁾ Maximum allowable torque for installation with any tangential impact screw driver.
- ^η For combinations of tensile loads and shear loads or for shear loads with lever arm (bending moments) as well as reduced edge distances or spacings (anchor groups) we recommend to use our anchor design software C-FIX.
- ⁸⁾ Minimum possible axial spacings resp. edge distance while reducing the permissible load.
- ^{a)} The given loads refer to the European Technical Assessment ETA-15/0352, issue date 30/10/2018. Design of the loads according ETAG 001, Annex C, Method A (for static resp. quasi-static loads).
- 10 A reinforcement in the concrete to prevent splitting is required. The width of the cracks has to be limited under consideration of the splitting forces at w_k \sim 0,3 mm.
